

Farmers' Suicide: Missing Issues

E Revathi

G PARTHASARATHY and Shameem's study *EPW*, March 26), 'Suicides of 'Cotton Farmers in Andhra Pradesh; An Exploratory Study', is indeed an exploratory study which focused on several interrelated causes for suicide deaths like adverse rainfall, inconsistent prices, rise in cost of cotton cultivation, had position of co-operative credit agencies and commercial banks, growing power of the moneylender, trader, landlord combine and growth of leaseholding in cotton cultivation (p 721). However, there are some missing issues in the analysis. The first is the non-inclusion of irrigation as a major factor for the tragedy in the district. On the surface of the problem it may not appear as an explicit cause but it is one of the implicit causes for the soaring debts of the farmers. It is very much evident that in the process of creating private sources of irrigation most of the farmers have invested heavily on digging and deepening of wells. A study of 50 deceased farmers' in Warangal district shows that well is the largest source of irrigation for about three-fourths of the farmers. Only about one-third of the wells were dug under the subsidy schemes of the government. In the rest of the cases farmers themselves have borne the expenses for digging of wells. Besides this the depletion of groundwater in the recent years has necessitated deepening of wells and laying of in-well bores, the investment for which averaged anywhere between Rs 50,000 to Rs 1,00,000. Moreover, the periodical deepening of wells also required amounts in the range of Rs 10,000 to Rs 15,000. In spite of these efforts only 25 per cent of the wells could yield sufficient water. All this is to substantiate the increasing expenditure incurred by the farmers towards creation of private irrigation. The same paper also probed into the purpose of burrowing by the farmers which clearly showed that it is mostly for creation of agricultural infrastructure like sinking and deepening of wells, laying in-well bores, purchase of bullocks and other farm equipment. Fifty per cent of the cases have reported obtaining loans for improvement of wells and about 20 per cent farmers incurred debts for digging wells in the last three to four years. These results could be extrapolated to the universe of deceased farmers, 104 up to March 31, 1998. Table 5 (p 722) in the study shows that irrigated area under cotton in Warangal district was the highest in the mid-1980s (77.90) and was about 41.60 in 1994-95. Area under cotton and percentage of area irrigated are not increasing commensurately. The notable point is that this irrigation is not public irrigation but private irrigation. In the near complete absence of public irrigation for lands under cotton cultivation, when private irrigation is the inevitable source, should this not be understood as one of the major sources for incurring debt, especially

when almost all of the deceased farmers belong to the small and marginal farmer categories. Irrigation sources in the district show that in the year 1994-95 dug wells were the largest source of irrigation accounting for 64.37 per cent of gross area irrigated, tank irrigation was the second largest source with 31 per cent and canals and other sources accounted for a meagre percentage of only 4.59. Recent studies show that as the current expenditure on repairs of major tanks, desilting works, repair of bunds had been reduced, the area under tank irrigation also has shown substantial decrease. There is not much difference between gross area irrigated and net area irrigated where area irrigated more than once is only 38,110 hectares. Case studies of deceased farmers gathered by various fact-finding committees too show that substantial borrowed amounts have been invested in digging or widening of wells which accumulated into a debt burden. Sudershan Reddy and Venkateshwar Rao's study illustrates the reasons for suicide deaths as crop failure in the case of 12 farmers, crop failure and debt burden in the case of 21 farmers and crop failure, debt burden and others in the case of 17 farmers. This shows that crop failure is the root cause which again is a cumulative result of lack and failure of irrigation, near drought conditions, pest problem, monoculture, deteriorating soil structure. Drought again is a result of low average rainfall and lack of irrigation facilities. Is it not neglect of a region for decades on the irrigation front which is one of the main causes for the farmers' deaths? Is it not partial distribution of resources generated within the region which is denied its due share a sufficient reason for the farmers' deaths? Though 68.5 per cent and 79 per cent of the catchment area of Krishna and Godavari rivers is in Telangana region, the water allocation is not to the same extent. Besides this, cultivable land in both the Godavari and Krishna basins is higher in Telangana region. Going by any criteria (either catchment area criteria or cultivable area criteria) water allocation to Telangana and Andhra regions was to be in the ratio of 70 per cent and 30 per cent. Therefore, heavy investment on private irrigation sources due to neglect of the region, especially on the irrigation front, is one pertinent reason for the accumulated debt burden of the farmers resulting in their suicides. This is amply proved from the case studies of the deceased farmers.

The second missing point is about the sources of credit in the district. The conclusion of the authors that there is a structural change in the character of the moneylender from that of a professional moneylender to agriculturist moneylender (p 726) is not true in the context of agrarian conditions of Warangal district. The role of professional moneylenders is gone in the villages. Whatever surplus that

an agriculturist (middle and big farmers) gets is now being invested either with the commission agents or with the finance companies in the district headquarters. On the other hand, the sources of credit available to the farmers besides the institutional ones are commission agents, dealers and sub-dealers, of pesticides and private sources. In most of the cases, as studies reveal, it is either the commission agents (adtidar) or the pesticide dealer network that finances the credit needs of the farmers. In all there are about 13,000 pesticide dealers in the district, most of whom are migrants and erstwhile cotton farmers. They have built up a network of sub-dealers at the level of mandal headquarters and finance the farmers' needs through them. These dealers start collecting their dues from the farmers from the second and third pickings of cotton. They generally charge a 15 per cent to 20 per cent higher price over the normal price. Such kind of tie-up with pesticide dealers who also supply seeds normally of low quality is tightening the noose around the farmers' necks. The commission agents, the second major source of credit to the farmers, also exploit them through the output linkage system. They receive a fixed amount of commission on the sales of farm produce and so in order to assure their business they start advancing amounts to the client farmers. The rate of interest charged is 24 per cent and when payments are deferred the commission rate exceeds the normal 2 per cent by another 3 per cent. This agency of finance has grown popular along with the increase in the cotton cultivation. The other major problem is tenancy. Since a third of the deceased farmers were tenants who are not qualified to receive any institutional credit, dependence on the above sources became inevitable. However, the peasant is not borrowing from the landowner and therefore the combination of the functions of landowner, moneylender and trader is not valid in this particular context.

The history of Telangana shows innumerable peasant movements - the anti-Nizam struggle or the Telangana Armed Struggle in the 1950s and the anti-feudal struggle under the leadership of naxalite parties in the 1970s. However, defeatist tendencies like that of the suicides by the farmers are quite a new phenomenon to the region. More than sociological reasons like alienation of individual from family and society, it is the politics and economics of neglect of a region for decades that is the cause of the suicide deaths. A political dealing with the issue does not throw much light on the problem of suicides.

NOTES TO THE FINANCIAL STATEMENTS AS AT MARCH 31, 1998

(Amounts in thousands of Indian Rupees)

		1998	1997
<p>1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES</p> <p>(a) General</p> <p>The financial statements have been prepared under the historical cost convention, and conform to statutory provisions and practices prevailing within the banking industry in the country.</p> <p>(b) Investments</p> <p>Investments are valued in accordance with the circulars of the RBI.</p> <p>(i) Investments in Government and other approved securities and bonds, intended to be held to maturity are valued at cost. In case the cost price is higher than the face value, such premium is amortised over the period to redemption. Where the cost price is less than the face value, such discount is ignored.</p> <p>(ii) Current investments and Government securities, not intended to be held to maturity are valued at lower of cost or market value. Market value is determined on the basis of market quotations at year end, as specified by the RBI. Net depreciation, if any, is provided for; net appreciation, if any, is ignored.</p> <p>(iii) Treasury bills and commercial paper are valued at carrying cost (i.e. face value less unearned interest).</p> <p>(c) Advances</p> <p>Doubtful advances are identified by periodic appraisals of the portfolio by management and appropriate provisions are made based on the provisioning guidelines issued by the RBI. As at March 31, 1998, the Bank has no doubtful advances to report. The Bank has however, made a general provision of Rs.15 lakhs against total advances.</p> <p>(d) Fixed assets and depreciation</p> <p>(i) Fixed assets are stated at cost less accumulated depreciation. The Bank capitalises all costs relating to the acquisition and installation of fixed assets,</p>	<p>(ii) Depreciation has been provided on the written down value method at the rates specified by the Head Office, which are higher than the minimum rates prescribed under Schedule XIV to the Companies Act, 1956, except for computer equipment where depreciation has been provided at the rates specified in Schedule XIV to the Companies Act, 1956.</p>

AUDITORS' REPORT ON THE FINANCIAL STATEMENTS UNDER SECTION 30 OF THE BANKING REGULATION ACT, 1949

We have examined the balance sheet of The Toronto-Dominion Bank -Bombay Branch ('the Bank') as at March 31, 1998 and the related profit and loss account for the year then ended. Our examination was made in accordance with generally accepted auditing standards and, accordingly, included such tests of the accounting records and such other auditing procedures, as we considered necessary in the circumstances. We have also obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our examination and have found them to be satisfactory.

In accordance with the provisions of Section 29 of the Banking Regulation Act, 1949 and the provisions of sub-sections (1), (2) and (5) of Section 211 and sub-section (5) of Section 227 of the Companies Act, 1956, the financial statements are not required to be, and are not, drawn up in accordance with Schedule VI to the Companies Act, 1956. The financial statements are, therefore, drawn up in conformity with Forms A and B (revised) of the Third Schedule to the Banking Regulation Act, 1949,

In our opinion, the accompanying financial statements give a true and fair view of the state of affairs of the Bank as at March 31, 1998 and of its profit for the year then ended.

Furthermore, in our opinion,

- (a) the transactions of the Bank which have come to our notice have been within its powers;
- (b) the balance sheet and the profit and loss account are in agreement with the books of account, and give the information required by the Companies Act, 1956 in the manner so required for banking companies; and
- (c) the Bank has maintained proper books of account as required by law insofar as appears from our examination of those books-

How to make your Investment Tax Efficient and Liquid

Introducing

OPEN ENDED

PURE DEBT
SCHEME

DAILY NAV

CAPITAL GAINS

INDEXATION

ATTRACTIVE
POST-TAX RETURNS

UTI's Bond Fund is a 100% pure debt fund investing entirely in debt and money market instruments. Income earned and capital appreciation will be ploughed back and reflected as growth in the NAV. There shall be no income distribution under the fund. The 'No Load' feature means sales and repurchase will be effected at NAV to be declared on daily basis.

**Other important features of the
UTI BOND FUND**

- **Attractive post-tax returns.** The Capital appreciation in the NAV will be treated as Capital Gains with indexation benefits under sections 48 & 112 of Income Tax Act, 1961.
- **Minimum investment:** Rs. 10,000/-. No maximum limit. Minimum Rs. 500/- for subsequent investment under folios.
- **High Liquidity:** The Bond Fund is Open Ended. NAV is to be declared daily. Sale/Repurchase will be at NAV. The Fund shall re-open for Sale/Repurchase after 30 days from the closure of the initial offer.
- **No Load:** There is no load for exit after one year. For exit before one year there will be a contingent deferred sales charge of 1.5% to NAV.
- **Also available Capital Gains tax exemption under sections 54EA & 54EB of Income Tax Act, 1961.**
